LinkedIn: <https://www.linkedin.com/in/kashvi-gulati/>

Github: <https://github.com/KashviGulati>

Email: kashvigulati42@gmail.com

Mobile: +91 8307533390

SKILLS

Languages: C++, C, Python, SQL, JavaScript

Frameworks & Libraries: Flask, Django, React, Scikit-learn, PyTorch, NumPy, Pandas, Matplotlib, LangChain

Tools/Platforms: Git, GitHub, VS Code, SQLite, Excel, Power BI, Supabase, n8n, REST APIs

Cloud & DevOps: AWS(S3), Docker

Soft Skills: Adaptability, Effective Communication, Collaborative Teamwork, Quick learner

INTERNSHIP

NetPy Technologies | [Certificate](#)

Jun' 25 – Sep' 25

Full Stack Developer Intern

- Developed a production-ready Android application frontend using React Native (Expo), improving UI responsiveness and layout stability by 30%.
- Implemented JWT authentication and refresh token workflows, enhancing session reliability and reducing re-authentication issues by 25%.
- Collaborated in an Agile development environment, contributing to sprint planning, task execution, and feature delivery.

PROJECTS

End-to-End Data Engineering Pipeline | [GitHub](#)

Mar'26

- Built a scalable ETL pipeline in Python to ingest multi-source datasets (CSV/APIs) into a centralized PostgreSQL analytics database.
- Optimized relational schema and SQL queries (joins, indexing) to improve storage efficiency and analytical query performance.
- Integrated AWS S3 for cloud storage and orchestrated automated pipelines using Apache Airflow DAGs, with built-in data validation checks.

Tech stack: Python, SQL, PostgreSQL, AWS S3

CodeScope AI- Local RAG Based Code Intelligence Tool | [GitHub](#)

Jan'26

- Engineered a fully local, project-agnostic RAG-based code intelligence system to semantically analyze large, multi-language codebases and answer natural-language queries with file- and line-level source attribution.
- Executed semantic code retrieval using CodeBERT embeddings and FAISS vector database, enabling meaning-based search beyond keyword matching across large codebases while reducing hallucinations through strictly grounded, context-constrained LLM responses.
- Designed a modular, production-style architecture (scanner-chunker-embedding index-RAG engine -local LLM via ctransformers), supporting extensibility to new languages and safe-failure behavior when logic is absent.

Tech stack: Python, RAG, SentenceTransformers, CodeBERT, FAISS, ctransformers, Local LLMs, AST Parsing

AirSentine AI – Real Time AQI Intelligence System | [GitHub](#)

Sep' 25

- Built a full-stack AQI monitoring platform (Flask + REST APIs) with real-time ingestion, city analytics, and 24-step Transformer-based AQI forecasting
- Trained and deployed 5 ML models (Isolation Forest, Random Forest, XGBoost, Gradient Boosting) for anomaly detection, AQI classification, and regression.
- Integrated dual anomaly detection (Isolation Forest and Z-score) to identify pollution spikes and improve alert reliability.

Tech stack: Python, Flask, Scikit-learn, XGBoost, PyTorch, Pandas, NumPy, REST APIs, Cron Jobs

CERTIFICATES

Advanced Data Science and Generative AI | [AlgoTutor Academy](#) | [Certificate](#)

Aug' 25

The Bits and Bytes of Computer Networking | [Google](#) | [Certificate](#)

Sep' 24

EXTRA-CURRICULARS AND ACHIEVEMENTS

- Finalist in Google Cloud Agentic AI Day Hackathon in Bangalore
- 2nd place in Group Discussion Competition organized by Centre for Professional Enhancement

Jul'25

Dec'25

EDUCATION

- Lovely Professional University**
Bachelor of Technology Computer Science and Engineering; CGPA: 8.29
- GMSSSS**
Senior Secondary; Percentage: 75%
- ST. Thomas School**
Secondary; Percentage: 95.6%
